MILWAUKEE - On Sunday, May 17th, 2026, The Sherman Park Community Association, Inc., (SPCA) and its ECO Ambassadors will host its 5th annual Earth Day in May celebration in Sherman Park located at 3000 N. Sherman Blvd. from 12:00 PM – 4:00 PM. The event will be held rain or shine.

SPCA joins nations all over the world in continuing the legacy of the first earth day held in 1970! Since that time EARTHDAY.ORG has been the world's largest recruiter to the environmental movement, working with more than 150,000 partners in over 192 countries with 1 billion people helping to drive positive action to protect our planet. Earth Day activities kick-off on April 22 every year and SPCA carries that momentum into our annual Earth Day in May celebration.

The community is invited to join residents, city agencies, non-profits, and environmental educational and advocacy groups in learning about sustainability, livable communities, and conserving our natural resources in an effort to improve the health, well-being and the quality of life for Sherman Park residents and those throughout the Milwaukee community.

There will be a plant and starter vegetable sale along with information about how to save our planet's resources and use them wisely. There will also be a "stuff swap" where people bring items they are no longer using to swap with other community members. This stuff swap is a community-focused event where people trade gently-used clothing, accessories, books, and home goods to refresh their belongings and reduce waste.

This is a family-friendly event with free food, information on community resources and an opportunity to gather with neighbors, friends and community leaders to share ideas, catch up on community news and have fun. SPCA looks forward to seeing everyone there!

About The Sherman Park Community Association, Inc.

The Sherman Park Community Association, Inc. mission is to make Sherman Park an attractive and interesting neighborhood for all people. It is a 55-year-old 501(c)3 nonprofit organization known for addressing and correcting barriers that have often prevented residents from accessing an improved quality of life, the kind that would include access to self and family-supporting jobs, home ownership, and eco-friendly consciousness.
